

HIMANSHU NAINWAL

Software Engineer (SDE)

 [+91-6397499593](tel:+91-6397499593)  himanshunainwal0@gmail.com  [LinkedIn](#)  [GitHub](#)

Professional Summary

Backend Software Engineer with 2+ years of experience building and integrating scalable REST APIs, microservices, and third-party system integrations (QuickBooks, GrassBlade xAPI/LRS) using Java, Spring Boot, PostgreSQL, and Redis. Skilled in designing secure authentication flows (JWT), custom platform architecture, and performance-focused backend systems.

Technical Skills

Languages: Java, JavaScript(Basic),
Frameworks: Spring Boot, Django, Node.js, Express.js, Spring Cloud, Hibernate, JPA, **Microservices**
Databases: MySQL, PostgreSQL, **ChromaDB** (Vector Database), **Redis**
Message Brokers: Apache Kafka, RabbitMQ
Integrations: REST APIs, xAPI/LRS (GrassBlade), QuickBooks SDK, JWT
Cloud & DevOps: Docker, Jenkins, CI/CD Pipelines
AI/ML Tools: LangChain, RAG Architecture, Semantic Search, Vector Embeddings
Tools: Git, Maven, Gradle, IntelliJ IDEA, VS Code, Postman, Swagger,

Experience

Oodles Technologies

Nov 2024 – Present

Associate Consultant – Development

Gurugram, Haryana

- Built a Java-based backend integration connecting a custom application to **QuickBooks Online**, so that every payment made in-app automatically triggers a corresponding update to the QuickBooks ledger, enabling real-time, secure, and scalable accounting data exchange.
- Partnered with backend and QA teams to design **bidirectional synchronization** for customers, invoices, and payments, improving accounting data accuracy by **25%**.
- Delivered **RESTful CRUD** endpoints using the **QuickBooks SDK** and **JSON APIs**, decreasing manual reconciliation workload by **30%**.
- Enhanced reliability through centralized **error handling**, structured **logging**, and **token refresh** workflows, cutting integration downtime by **40%**.
- Architected and integrated **REST APIs** for **LMS** functionalities including slide data storage, session management, enrollment handling, and course completion tracking, persisting structured records in **PostgreSQL**.
- Designed and built a custom-developed LMS backend (independent of **Moodle** or any off-the-shelf platform), architecting core modules for **SCORM** session management (start, resume, restart, completion) and story session tracking with unique session IDs.
- Integrated **GrassBlade xAPI (LRS)** endpoints to retrieve learner activity and course-completion statements, implementing Key/Secret-based authentication and per-Learner ID queries to surface granular progress data to downstream services.
- Engineered secure **SCORM** course-launch handshake passing Course ID, Enrollment ID, and **JWT** Bearer tokens from the LMS to the SCORM player, and used the token to authenticate all subsequent API calls between the player and backend services.
- Built and maintained SCORM-based learning solutions ensuring seamless course execution, progress tracking, and analytics extraction; cached frequently accessed learner state data in **Redis** to reduce database load.
- Developed a child attendance management system that logs course attempts in real time and triggers automated attendance notifications to parents through an integrated messaging API.
- Designed backend **APIs** for capturing slide-level user interactions and persisting granular analytics payloads, enabling downstream **Semantic Search** over learner activity records.

STL Digital

Oct 2023 – Jun 2024

Graduate Engineer Trainee

Pune, Maharashtra

- Revamped an **e-Commerce** application using **Spring Boot**, **React**, and **MySQL**, enhancing transaction throughput and data flow by **25%**.
- Implemented a **microservice-based architecture** with **JWT authentication**, boosting scalability and strengthening security compliance by **40%**.
- Redesigned **UI workflows** for modules such as Login, Signup, and Product Details, improving user navigation by **30%**.

Projects

COVID-19 Tracker | *REST API, React, JavaScript, Git* | [GitHub](#)

- Engineered a **REST API** integration delivering real-time **COVID-19** statistics to the customer service platform, achieving a **50%** reduction in response time to pandemic-related customer inquiries.
- Enhanced responsiveness with **interactive charts** and optimized **API** usage, cutting page load time by **40%**.

Web Series Recommendation System | *React, JavaScript, Git, MongoDB* | [GitHub](#)

- Designed backend **APIs** using **Node.js** and **MongoDB** to deliver personalized recommendations, optimizing query performance and reducing response time by **30%**.

Education

Graphic Era Hill University

B.Tech in Computer Science and Engineering
